## Overview

### Description

CAT5 KVM switch can control multiple computers form a set of console (monitor, keyboard and mouse).

There is no better way to save time and money than with a CAT5 LED console installation. By using the CAT5 LED console with its sliding LED console to manage your installation, you will gain below benefits: (1) eliminate the expense of purchasing separate keyboards, monitors and mice; (2) save all the space those extra components would take up; (3) save space that a keyboard, monitor and mouse would take with a standard KVM switch; (4) save on energy costs; and (5) eliminate the inconvenience and wasted effort involved in constantly having to move from on computer to another.

It is easy and fast to install the CAT5 KVM switch; you just need to connect corresponding cables to the right ports of the CAT5 KVM and its module without software configuration.

It's easy access to any selected computer via front panel LEDs or OSD menu, allowing convenient auto scan feature auto scanning and monitoring selected computers.

CAT5 KVM switch can connect multiple computers with RJ-45 connector and CAT5 connecting cables. Transmission distance is up to more than 100M, so it doesn't need a KVM extender.

### Features

- Access and control up to 8 /16 /32 computes
- Supports Multiple systems: PC, Mac, Sun etc.
- Two level password security--only authorized users view and control computers; up to four users and an administrator with a separate profile for each
- Users can set up different hot keys( **【 Scroll Lock】** / **【 Caps Lock】** / **【 F12】** / **【 Ctrl】** ), auto scanning time, port display time, log out time, buzzer on/off and mouse on/off according to their different needs
- Convenient computer switching via mouse
- Broadcast mode--operations simultaneously performed on all selected computers
- No software--switching port via front panel LEDs and OSD menu
- Hot pluggable --add or remove computers without having to power down the switch
- Auto scan feature for monitoring user-selected computers
- Keyboard and mouse emulation function.
